通过按键去启动一个app

startActivityLocked(真正启动app)

resumeTopActivityLocked

ActivityThread分析2(接上页) handleMessage分析

handleMessage接收到 LAUNCH_ACTIVITY消息

这里真正创建 Activity,但是未启动,只是创建和初始 化操作

这函数里主要有

- 1. mActivityThread.mInstrumentation.newApplicati on(负责创建,初始化activity)
- 2. Instrumentation. callApplicationOnCreate(app), 这里是执行apk中onCreate函数,即真正开始执行apk 的代码
